

NITHYAA KESAVAMURTHY

425-999-9786 | nithyaa.k7@gmail.com | nithyaak7.github.io/Data-Analyst-Portfolio | linkedin.com/in/nithyaa-k

Data Analyst. Business Intelligence Analyst.

SUMMARY

Data & BI Analyst who turns complex datasets into dashboards, data models, and KPI-driven reporting that inform business decisions. Experienced across the analytics stack — SQL data modeling, Python analysis, and interactive dashboards in Apache Superset and Power BI — with an earlier foundation in Oracle SQL/PL-SQL and enterprise software engineering. MS Data Analytics Engineering Candidate at Northeastern University.

CORE COMPETENCIES

Reporting & Insights · Dashboard Development · KPI Framework Design · Data Visualization · Advanced SQL Development · Data Modeling · Data Quality Assessment · AI-Assisted Analytics · Statistical Analysis · Query Optimization · Data Governance

SKILLS

- **Languages & Analytics:** Python (Pandas, NumPy, scikit-learn), SQL, MS Excel (Data Cleaning, Pivot Tables, VLOOKUP/XLOOKUP)
- **Visualization & BI:** Apache Superset, Power BI, Tableau, Seaborn, Matplotlib, Plotly
- **Databases:** PostgreSQL, MySQL, MongoDB, Oracle PL/SQL
- **AI Tools:** Google Gemini, ChatGPT, Claude, Google Antigravity
- **Data Governance:** RBAC, Row-Level Security (RLS)

EXPERIENCE

Data Analyst — MethodHub

Apr 2025 – Present

- Modeled recruitment data into a star schema with fact and dimension tables for candidates, jobs, interviews, and offers, enabling self-service analytics for 15+ recruiting and leadership stakeholders.
- Designed and deployed 6 interactive Apache Superset dashboards spanning the end-to-end hiring funnel, replacing manual reporting with automated daily, weekly, and monthly reporting to improve hiring visibility and recruiter performance tracking.
- Developed advanced SQL metrics, including interview success rate, participation rate, stage-wise funnel conversions, sourced-to-joined analysis, and workflow status indicators, enabling leadership to monitor KPIs and identify pipeline bottlenecks.
- Performed comprehensive SQL-based data quality assessments across recruitment datasets by validating completeness, accuracy, consistency, uniqueness, referential integrity, and business rules, improving analytics reliability and reporting readiness.
- Defined and standardized recruitment KPIs and metric definitions, establishing a consistent reporting framework that improved data quality and alignment across dashboards and stakeholders.
- Partnered with Business Analysts to translate hiring and recruiting requirements into scalable data models, SQL transformations, and interactive dashboards that supported operational and strategic decision-making.
- Documented data models, KPI definitions, SQL logic, and dashboard standards to improve governance, maintainability, and knowledge sharing across the analytics team.
- Built two custom plugins in Apache Superset — a recruiter leaderboard and axis-label wrapping enhancement — using JavaScript and AI-assisted development tools to extend native dashboard functionality.
- Implemented role-based access control (RBAC) and row-level security (RLS) for five user personas, delivering secure, role-specific dashboards while maintaining data governance.

Career Break — Full-Time Parenting & Professional Development

- Took an intentional career break to raise two children, while progressively upskilling toward a transition into data analytics.
- Completed a Professional Certificate in Data & Data Analytics (UCSC Silicon Valley Extension) and deepened expertise through focused data-analytics coursework and certifications.
- Began a Master's in Data Analytics Engineering at Northeastern University (Sep 2024–present), building hands-on experience in Python, SQL, data modeling, and dashboarding.

Software Engineer — HCL Australia, Sydney

Jun 2008 – Sep 2009

Client: Commonwealth Bank of Australia

- Delivered SOAP-based service integrations for Commonwealth Bank of Australia on the Pega PRPC platform, configuring the rules engine for 2 enterprise banking workflows: a home-loan calculation system (fees, interest rates, and repayments) and an automated dishonored-payment decisioning system.
- Optimized Oracle SQL queries using joins, CTEs, subqueries, and indexing strategies, reducing query run time and supporting faster operational processing.
- Translated complex business requirements into scalable technical specifications and validated system reliability through regression and system-integration testing.

Member Technical Staff — HCL Technologies, Chennai

Feb 2007 – Jun 2008

Clients: FIS, Commonwealth Bank of Australia

- Contributed to early-stage development on the Commonwealth Bank of Australia engagement from HCL's Chennai offshore team, before relocating onsite to Sydney to continue the project.
- Built new features for a C++-based life-insurance policy administration system (FIS/RGS), participating in requirements, design, build, and production-support phases.

PROJECTS

Google Play Store Analysis — *Python, Pandas, Matplotlib/Seaborn*

- Analyzed Google app-store data to identify market trends and user-engagement patterns across categories, ratings, and downloads.
- Performed data cleaning, statistical analysis, and visualization to surface actionable insights.

Exploratory Clustering of Electric Vehicles — *Python, scikit-learn, Pandas, Seaborn*

- Applied hypothesis testing and correlation analysis to identify relationships between vehicle features.
- Implemented K-means clustering to segment vehicles into 2 groups and visualized results for market-segmentation insights.

Data Modeling & Dashboard for Recruiter Success Rate — *MySQL, MongoDB, Python, Apache Superset*

- Modeled requirements into an ERD/UML and relational schema; built the database and performed analytics using SQL and NoSQL.
- Developed a Python application to connect to MySQL and visualized results with Matplotlib/Seaborn.
- Cleaned and ingested data into Apache Superset and built an interactive dashboard showcasing recruiter performance and success rate.

EDUCATION

Master of Science, Data Analytics Engineering — Northeastern University, Boston

Sep 2024 – Expected Aug 2027

- Relevant Coursework: Foundations for Data Analytics Engineering, Computation & Visualization for Analytics, Data Management for Analytics.

B.E., Computer Science — Saranathan College of Engineering, Anna University

Jul 2002 – Apr 2006

- Gold Medal — Probability and Queueing Theory.

CERTIFICATIONS

Professional Certificate in Data & Data Analytics — UCSC Silicon Valley Extension

Aug 2017 – Nov 2018

- Key Projects: Heart-disease analysis in R; geospatial Starbucks locator (MongoDB); Walmart sales dashboard (Power BI); Big Data in retail case study.

HONORS & AWARDS

- Excellence Award (2018) — recognized for the best dashboard in Data Analytics coursework, including business intelligence solutions.
- Recognition Award — HCL Technologies, Australia (2008), for contributions on the Commonwealth Bank of Australia engagement.
